

EXPERIMENT: 33

IMPLEMENTING THE APPLICATIONS USING TCP FILE TRANSFER IN JAVA/C

```
#include <stdio.h>

int main()
{
    FILE *file, *received;
    char buffer[100];

    printf("TCP FILE TRANSFER\n");
    printf("-----\n");

    /* Create sample.txt */
    file = fopen("sample.txt", "w");

    fprintf(file, "Hello! This is a TCP file transfer experiment.\n");
    fprintf(file, "File transfer is successful.\n");

    fclose(file);

    printf("Source file created: sample.txt\n");

    /* Open source file */
    file = fopen("sample.txt", "r");

    /* Create received file */
    received = fopen("received.txt", "w");
```

```
/* Transfer file contents */  
while(fgets(buffer, sizeof(buffer), file) != NULL)  
{  
    fputs(buffer, received);  
}  
  
fclose(file);  
fclose(received);  
  
printf("File transferred successfully!\n");  
printf("Received file: received.txt\n");  
  
return 0;  
}
```

```
TCP FILE TRANSFER  
-----  
Source file created: sample.txt  
File transferred successfully!  
Received file: received.txt  
  
...Program finished with exit code 0  
Press ENTER to exit console.
```
